

What's So Quantum About PATHS?

In 1979, the Princeton Engineering Anomalies Research (PEAR) program at Princeton University was setup to determine if human consciousness can externally affect the physical world. In 2008, PEAR was closed because they accomplished what they set out to do.

Here is a quote from their own press release announcing the closing of the lab,¹ “Jahn and his colleague, Brenda Dunne, a developmental psychologist from the University of Chicago who has served throughout as PEAR's laboratory manager, together with other members of their interdisciplinary research staff, have focused on two major areas of study: anomalous human/machine interactions,² which addresses the effects of consciousness on random physical systems and processes; and remote perception,³ wherein people attempt to acquire information about distant locations and events. The enormous databases produced by PEAR provide clear evidence that human thought and emotion can produce measurable influences on physical reality.”

The most popular demonstration of mind over machine is the fact that the intention of the human mind is all that is needed to influence the output of a random number or event generator. Random number generators are not truly random and display patterns if observed long enough so random event generators are more preferable to give random output.

A Random Event Generator (REG)⁴ is a piece of hardware connected to a computer that generates white noise. If you turn the television to a station that is off the air and it has the black and white “snow” on the screen with the hissing static, that is a form of white noise. This white noise is converted into 0's and 1's. The string of 0's and 1's that is output from this REG will be approximately half 0's and half 1's. This is the predicted probable output. The same thing applies if you flip a coin 100 times. You will see that heads and tails come out about the same amount of times.

On smaller samples of flipping coins 10 times, you may get 7 heads and 3 tails. This deviates from the most probable output of half and half. The larger the sample, the more closely the output follows the predicted 50/50 outcome. If the coin was flipped a million times, it would be closer to 50/50 than a very small sample.

Imagine a group of people is watching a computer screen with a graphical display showing the output of the REG. If one hundred people are watching this and they all intend for only heads to be flipped, which could be either a 0 or 1, the output of the

⁴ Random Event Generator Design, <http://noosphere.princeton.edu/reg.html>

generator will start to produce more heads than tails deviating statistically away from the predicted 50/50 outcome. This is a startling and profound truth that has been demonstrated for three decades. So the answer is most definitely *yes*, the human mind can influence the physical world and can be measured with REG's.

Although this effect has been proven to really happen, the science behind answering *why* this happens is still not very solid. Here is another quote from the PEAR press release, "There are still many important questions to be addressed that will require a coordinated interdisciplinary approach to the topic, but it is time for the next generation of scholars to take over."

So if the human mind has been scientifically proven to be able to influence a piece of computer hardware at a distance, it might be a logical deduction to ask if a piece of computer hardware is able to have an effect on the human mind also at a distance. Considering the fact that people are not physically wired to the computer hardware in these experiments, it is all considered to be *at a distance*. It is interesting to note that physical distance does not change the effect. A person or group of people can be one foot from a machine or five thousand miles from the machine and the machine can just as easily be affected.

One of the most popular technologies that utilize the concept of quantum healing at a distance is the QXCI⁵ machine (Quantum Xrroid Consciousness Interface). It is a hardware and software combination that records a person's personal data such as name, birth date, birthplace and other information. The QXCI's hardware runs through a process that receives information on the person through *subspace*, which is the subtle quantum medium where information in the entire collective unconscious is stored. The QXCI's developer uses the term *subspace* but I prefer to use *Aether* to describe this quantum medium. I recently released *The Quantum Key*⁶ to educate the average person on what the Aether is and how the potentials are tapped from this virtual world into the physical world.

This is the diagnostic part of the QXCI machine. It is made possible because all information about everything in time and space from the past, present and future reside in the collective unconscious mind. There have been many names to describe this super recording system such as The Matrix, Akashic Records, Book of Life, Super Mind, Infinite Intelligence, and so on.

Every person and everything single possible piece of information about them is in the collective. The hardware of the QXCI has its REG influenced by the information in the collective corresponding to the person being scanned so to speak. Based on how the REG output is read, each piece of data is compared to a database.

For example, if information about the liver is being received, depending on the output reading, different readings will have different interpretations assigned to them.

⁵ QXCI, <http://www.theqxc.com/>

⁶ The Quantum Key, <http://www.thequantumkey.com>

The data is matched to the interpretation so that the person's liver condition can be known. This can be done by being physically connected to the machine or it can be done with absolutely no connection and from anywhere in the world.

To reverse the process for treatment by these same quantum means, any appropriate treatment for the person's liver if needed is sent backwards towards the hardware and is broken down and disordered into smaller pieces of data and is sent back into the aether. With the QXCI, this is done by frequencies where each piece of treatment data, etc... is assigned a specific frequency or Hz, which is how many times per second something turns off and on.

The person's subconscious mind has infinite connection to the entire collective. Their subconscious mind locks onto the information that is intended for them since their own personal identifiers are attached to it. The subconscious mind receives this information or treatment and the body follows suit by acting on the information that the subconscious mind is occupied with. Out of necessity, I developed a model of Synchronicity⁷ that gives a simple visual analogy of the conscious mind, subconscious mind and collective unconscious connection to each other, which I would recommend reading to further expand your understanding of this concept.

There are other variations of this technology that utilize the same fundamental concept with different twists to the method, but they are all rooted in the scientifically proven fact that the human mind and its intentions can influence random event generators at a distance and also because the process can be reversed and information sent out through hardware can be received and acted upon by the subconscious mind. Unfortunately, these machines cost many thousands of dollars and only one person at a time can be treated.

PATHS⁸, utilizing Rapid Data Transfer (RDT)⁹, is the most advanced form of these quantum subconscious mind technologies currently available anywhere in the world. And even better, it is available to anyone who has access to the Internet.

PATHS is not a diagnostic tool but rather, it is a tool that enables the subconscious mind to receive and process millions of pieces of information in a very short period of time. To be exact, it takes the user three minutes per week per topic to realize the results.

It is very common these days for people to use soundtracks that bring the brainwaves into certain frequencies while low volume affirmations are repeated in the background, usually barely comprehensible to the person listening. The idea is that when the mind is exposed to repeated affirmations, the person will eventually start to actualize the desired habits, patterns, beliefs, or other benefits. The benefits might include increased memory recall, better sleep, weight loss, more confidence or a myriad of other

⁷ Murakami Model of Synchronicity, <http://www.feelthevibe.com/synchronicity.pdf>

⁸ PATHS, <http://www.energypaths.com>

⁹ Rapid Data Transfer (RDT), http://www.energypaths.com/rapid_data_transfer.php

topics. These sound tracks usually take thirty minutes a day and the user needs to use them for a couple months for the effects to start being noticeable. This is fifteen hour per month time commitment.

There are many other ways that we can attempt to replace negative subconscious programming with positive and creative habits and they all have their own benefits and limitations. This could be NLP, hypnosis, prayer, reading affirmations or other modalities.

With PATHS, the user sits down at a computer and logs into a website with their own username and password to experience one part of the quantum nature of the technology. A customized theater presentation downloads to their computer, which corresponds to the modules they have chosen to receive benefits from. The modules can be anything from anti-aging, skin rejuvenation, increased sports performance, better memory, increasing synchronicities, boosting intuition, boosting gratitude, increasing self-esteem and confidence or dozens and dozens of other modules. The sleep module is automatically included with every customized presentation because we all know how important it is to get deep restful productive sleep.

The person using PATHS will watch the theater presentation for three to twelve minutes for an average of three minutes per module. These visual and audio theaters include cues targeting the person's subconscious mind. The subconscious mind recognizes that the theater is specifically for them and nobody else. The subconscious mind then downloads millions of instructions corresponding to the modules chosen and then the presentation is over.

Over the next seven days on average, the person's brain has assimilated and built new connections corresponding to the instructions that the subconscious mind received. The best analogy of how this is possible is that you could send one hundred pages to a printer all at once. The printer stores it in a memory. Then the printer prints one page at a time as it is able and this is like the brain forming new neural connections to correspond to this information as able. Since this process urges the mind/brain to work at a higher level, there are more readily available amino acids needed by the brain to create the neurotransmitters and build connections.

The other quantum part of PATHS is the hardware booster. This hardware is receiving the instructions for the modules customized for the user with their name, birth date and birthplace. The instructions for the modules are sent to this hardware booster, disordered and transmitted directly into the Aether or subspace.

Once the information is transmitted into the Aether, the person's subconscious mind will link up to this information that is connected to the person's unique identifying information and will download this information. The subconscious mind of the person using PATHS will take this information, store it and the brain will assimilate it by forming new neural connection corresponding to the data. Because the information is at

such a high rate in such a short period of time, this forces the brain/mind interaction into a higher level of operation that the normal human brain/mind is normally operating at.

There is one very significant difference between PATHS and the QXCI or other similar technologies and that is the fact that PATHS does not operate in any way, shape or form with *frequencies*. The hardware booster is transmitting the information sets in an analog of the so-called *Universal Language* that the subconscious mind innately operates in. This is probably the single most profound and significant advancement in the science of consciousness in the last one hundred years or more!

What is this *Universal Language*? If you were to think in your mind in your own verbal language, "Move my right arm," your right arm would move instead of your left leg kicking out. If you thought this in English, Chinese, Spanish, French, Japanese, Swahili, German or any other language, the result would be the same. For the fact that the biological physical response is the same no matter what verbal language the intent was formed in, this shows that there is some innate language or communication between the conscious thinking mind's *intent*, the subconscious mind and the ability for the subconscious mind to carry this message on to the body to invoke a physical response.

The PATHS RDT hardware booster is transmitting this information into the Aether not with frequencies but by a proprietary principle that has an effect that the subconscious mind already recognizes at its own language with virtually no translation needed.

By communicating more directly with the subconscious mind in this manner and at the huge repetitious cycle that RDT utilizes, the results are realized in a very fast manner that most people are not used to.

How long does it take people to internalize and actualize the concept in the book *Think & Grow Rich* or any other mindset philosophy for Law of Attraction or anything similar? Most people do not apply what they read as it is only information and data at the basic level. Few people take these concepts on wholeheartedly and apply them with gusto. Even few get the results they are expecting. For the average person caught in the day in and day out routine that most of us are familiar with, it really does take quite a bit of energy to really take something on to get the most out of it that we possibly can. Even using "brainwave soundtracks" with affirmations takes fifteen hours a week! Who has that kind of time to get results a few months down the road?

Even though PATHS is not a magical cure all bullet for everyone, the results are quicker than just about any other method. You can log into a website to watch a theater presentation for 3 minutes a week and your subconscious mind downloads massive amounts of information in regards to the mindset of Law of Attraction principles or whatever else you want to benefit from. Over the next week, your subconscious mind is feeding this information to your brain for processing at a very rapid rate in addition to your subconscious mind locking onto this information in the collective to assist the learning process. Before you know it, you notice that the negative thoughts are

disappearing, you have a more positive outlook on life, things are flowing better for you and you seem to have developed a knack for attracting to yourself those things that really matter most.

That is only one example of how PATHS RDT technology can work for you partly through the amazing proven concepts of quantum physics and the application of it to consciousness as demonstrated in the very profound way by PATHS. There are countless other things you can benefit from using this technology: skin rejuvenation, boosting self-esteem, increasing gratitude, experiencing unconditional love, increase sports performance, improve mindset for money, accomplishing your goals, increase business productivity, boosting intuition and many other modules.

The next time you think, What's so Quantum About PATHS, just think back to all the proven scientific research that has proven the concepts and that you get to benefit from right here right now simply by having a connection to the internet.
